(PC4 is not NOT food-safe, and all items in red have a cautionary label)

GLAZE TEXTURIZER

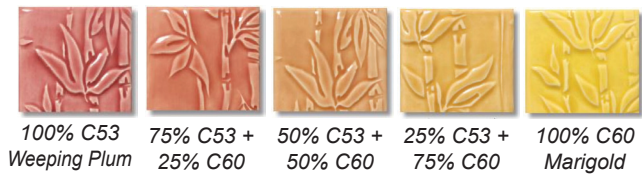

Brush 1-2 coats over or under any cone 5-6 glaze to create interesting effects. Example at right: Brush on one coat TH1 Texturizer and lightly sponge off. Next, apply 2-3 coats of PC55 Chun Plum.

TH1 (pints only)..... \$15.00 ea

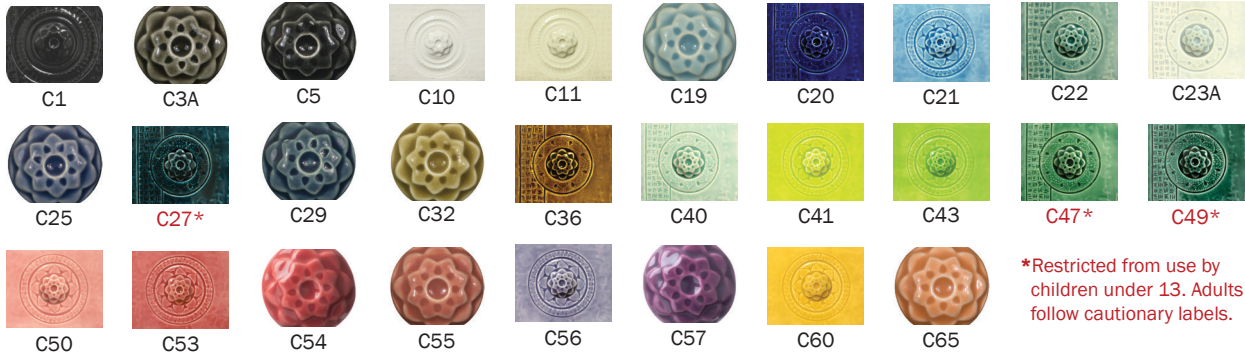

CELADON TRANSPARENT GLOSS

Celadon transparent glazes highlight surface texture and bring out the color of the clay underneath. All colors are dinnerware safe and are formulated to be mixable! Use Mixing Clear as a clear or to dilute glaze colors. We only stock **C1, C10 & C11** in gallons for \$80.00 each. All other gallons are special order.

Amaco Celadons are designed for mixing!

Celadons (pint size) \$19.00 ea

*Restricted from use by children under 13. Adults follow cautionary labels.

SHINO GLAZES

Shino glazes yield wonderfully varied colors based on application thickness. Light application favors the warm rust base, heavier application favors their opaque coloration. Textured surfaces enhance this effect. These glazes are formulated to be 100% mixable for color and finish.

Shino (in pints only) \$19.00 ea

All Spectrum products use ceramic frits and stains as their principal ingredients for superior appearance and consistency of results. Spectrum also uses a high percentage of stains in their recipes for more intensity, brightness, and depth of color. We stock these glazes in pints. Items marked with an asterisk (*) have a change in the iron oxide used in these glazes. The substitution looks darker in the jars but will NOT affect the glaze performance (this change affects batch #45260 and higher).

We carry Spectrum glazes in PINTS only. Glazes in gallons or dry 10-lb units are available by special order. Ten pounds of dry glaze yields about 2 liquid gallons.

Please call for prices & order lead-time.

These Metallic Glazes are runny! Be aware and plan your glazing accordingly. Do not apply to the bottom third of your wares.

Moroccan Sand Glazes

Dynasty Glazes

Mystic & Crystal Glazes

MOROCCAN SAND GLAZES

These glazes from Laguna offer a wide palette of reliable, repeatable colors for the cone 4-7 firing range. We only stock pints, but gallons and dry formulas are available by special order. Please call for prices and order lead-time.

STONEWARE CLASSIC: Mayco formulated this line of glazes, including Opals, and Ice (translucent) glazes, for cone 5-10 clay bodies. Fired finishes include gloss, high gloss, and flat in color, and range from bright and vibrant to earthy and subdued. Try them at various temperatures and in both oxidation and reduction, and on various clay bodies, for great color variations.

STONEWARE MATTE: From solid shades to those that create interesting color variations as they move and break. These glazes go from solid, opaque coverage, while others are semi-transparent and variegated. Application thickness is key to making the matte glazes work for you. They work well on a variety of clay bodies and fire between cone 5-10.

STONEWARE CRYSTALS: A unique line of glazes that contain colorful crystals in the glazes that are designed to melt and bloom during the firing. These crystals add variation in color, finish, and movement to the glaze. This line of glazes begin with a base glaze, which can be found within the classic glaze lines. Information about these base glazes are found on the label or go to the Mayco website.

We stock SW001, SW002 & SW004 in gallons! All other gallons are special order only. DRY glazes are special order in 10# bags.

STONEWARE GLOSS GLAZES

Mayco's Stoneware Gloss glazes produce bright, opaque colors with a high gloss finish. Stoneware Gloss glazes can be used in design, all over coverage and are the ideal product for intermixability at mid-range temperatures. The integrity of your design will remain unchanged as these glazes are incredibly stable and will not move or combine with surrounding colors. As with all of the Stoneware Glazes, these Gloss glazes work well on a variety of clay bodies and have a firing range from cone 5 to cone 10, some colors change slightly at higher temperatures, so test!

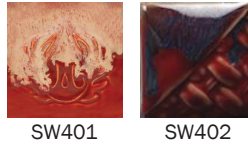

SW501..... White Gloss	\$14.65

FLUX GLAZES

SW-401 Light Flux and **SW-402 Dark Flux** are mid-range glazes that were developed to be used in combination with other mid-range glazes to produce flowing effects. Designed to fire to cone 5-6, but can be fired to cone 9-10. **PLEASE NOTE:** movement will be more pronounced when fired at the higher temperatures (cone 9-10).

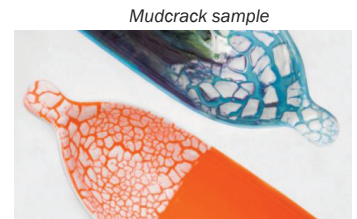

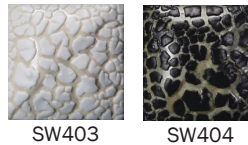

SW401..... LightFlux (4oz).....	\$5.25
SW402..... Dark Flux (4oz).....	\$5.25

MUDCRACK

SW403 White and **SW404 Black Mudcrack** were developed to create a highly textured, raised and cracked surface. Thicker applications will create more texture.

SW406.....Dark Magma.....	\$16.25

COYOTE CONE 6 UNDERGLAZES

Unlike other underglazes, these are designed to be fired between cone 6 all the way up to cone 10! There are 30 colors to choose from and are available in 4 oz jars. *UG001 & UG017 are also stocked in pints.

COYOTE SLOW-COOL GLAZES

The Constellation series of glazes are designed to shine in all kinds of firings. These glazes are unmatched for versatility, changing dramatically depending on how they are used. Thickness, firing temperature, and especially cooling speed can affect these glazes in marvellous ways. Now you can have crystal glazes without running, without seeding, and which you can fire along with your other glazes! By adding controlled cooling to a normal cone 6 firing, these glazes produce spectacular effects that were previously difficult to obtain. Available in pints only. For full firing instructions, visit georgies.com/coyote.glazes

COYOTE GLAZES

CONE 6 GLAZES

All Coyote glazes in gallons, 10lb or 25lb dry units are available by special order. Please call for prices & lead time.

COYOTE CLAY & COLOR

... manufactures a line of unique Δ6 glazes formulated to be reliable, economical, and beautiful. They've been proven by clay artists from beginners and students to professionals.

CG1-CG97 are opaque glazes that go from glossy to satin. Within this group, **CG59, CG61-CG64 & CG72** are Crawl Glazes that are NOT Foodsafe, as indicated in red. CG98-109 are translucent Celadon glazes. CG110-112 give you a Reduction look using your electric kiln. CG180-191 Enduro-Color glazes are designed to resist acid, chipping, crazing, scratching, staining and other hard use factors. Perfect for dinnerware! CG180-191 Vibro-Colors have the same characteristics as the Enduro-Colors but with a punch of color! CG210-215 vary dramatically depending on clay body, thickness of application, and sometimes with firing. These can be runny, so make sure you test and do not apply near the bottom of your pots.

TEXAS TWO-STEP

Oil spot glazes at cone 10 have provided some of the most striking and unique finishes in ceramics. Now, Coyote Texas Two-Step glazes provide the same sought-after effect at cone 6, in a breathtaking variety of color combinations. These glazes work as a two part system, with the top coat pulling away to reveal brilliant spots of the glaze beneath.

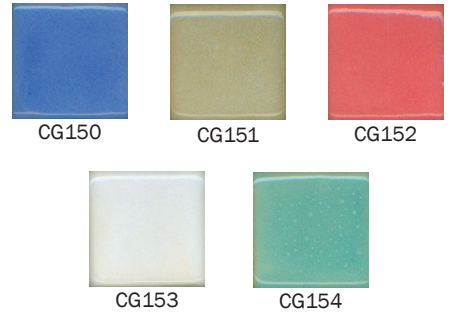

Below you can see the complete Two-Step series, with every overcoat/undercoat combination shown. To use the Texas Two Step glazes, simply apply a Step One Undercoat to bisque ware (two or three coats brushing or one coat dipped) and wait for it to dry completely. Then, cover all or part of the first color with your choice of Step Two Overcoat. When the piece is fired to cone 6 in an electric kiln, the glazes will interact, creating a phenomenal oil spot effect.

Varying the thickness of the glazes during application will have a dramatic effect on the finished piece, as the thicker the glazes get, the larger the spots they create will be. We found that the optimum thickness should be two coats of the Step One Undercoat and three coats of the Step Two Overcoat, but you may prefer thicker or thinner applications for different effects. Try experimenting!

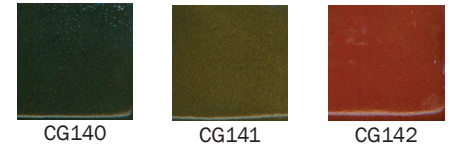

Overcoats

	Pint
CG150.....Blue Moon	\$16.80
CG151.....Birch.....	\$15.60
CG152.....Texas Rose.....	\$24.20
CG153.....Marshmallow.....	\$15.50
CG154.....Sea Mist.....	\$16.30

Undercoats

	Pint
CG140.....Licorice	\$16.90
CG141.....Coffee Bean.....	\$13.50
CG142.....Brick Red	\$31.00

For more information about firing the these glazes - go to our website

... georgies.com/coyote.glazes ...

Thickness test on the left showing Marshmallow (CG153) brushed over (CG140) Licorice.

Another test on the right with Marshmallow (CG153) dipped over Brick Red (CG142). Spots become noticeably larger and less regular after each new coat of glaze.

WHEN CLAY AND GLAZES

F**R**E*E*Z*E

First off, don't panic! Nothing has happened that the raw materials have not experienced a thousand times in their geologic history. With a little TLC, they'll be just fine and usable. First let the frozen clay or glaze thaw out, then follow these steps.

CLAY: You'll notice that your clay is wetter (therefore softer) than normal. That's because there are two kinds of water in clay: one is the physical water we add during production. The second kind is chemical water, bound into the molecules of the raw materials. Freezing draws out the chemical water and combines it with the physical water. As the clay thaws, the ice crystals form open space in the clay, so it's no longer de-aired. You will need to wedge your clay before use. If you want to dry it out more, take it out of the plastic bags the night before you plan to use it.

GLAZE: Once thawed, stir your glaze well. The fired qualities of the glaze remain intact; the fired color results will not change. You may notice that the solid particles in the glaze settle to the bottom faster. Sometimes the organic gums that suspend the particles, making the glaze easier to brush on, lose their potency after freezing. To fix the settling issue we recommend **Amaco's "Gum Solution."** It's a handy staple to have in your studio!

41371N..... Pint \$9.40

AMACO SUSPENDAID

Change a brushing glaze into a dipping glaze by using this anti-settling additive. Disregard the directions on the glaze label and use the instructions on the Suspendaid label. Add water and a small amount of Suspendaid to achieve the viscosity needed. This jar will adjust up to 2.5 gallons of glaze. Do not allow Suspendaid to freeze!

SA..... Pint only..... \$13.50

WHAT HAPPENED IN THE FIRING?

Great results are always what we hope for when opening the kiln after firing, but sometimes it just doesn't happen. Figuring out what happened can be difficult, but these tips might help answer some common questions.

Many gloss glazes look matte (left) when underfired.

Same glaze: the left bowl had a thinner application and 14 hours firing. The right bowl had a thicker application and faster firing (9 hours).

Some glazes look okay when underfired a little (on left), but create different effects when reaching their full temperature. (Sample Amaco glaze photos from Arts & Activities magazine, February 2015)

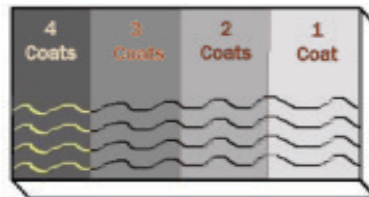

The same glaze can look different when applied on different clay bodies. Iron in the darker clay (left) reacted with the glaze and changed its color.

Some glazes that contain iron can change color if fired twice. The extended heat work changes the color and sometimes the surface too.

That's why we recommend witness cones for every firing!

How thick or thin you apply glazes can make a difference in the fired results! When trying a new glaze, always experiment with your application style to see where you get the best results. Your "two brushed coats" may actually be the same thickness as someone else's "three coats." We recommend making test tile strips from your clay, with some smooth and some textured areas, so you can see how the glaze works with *your* clay and *your* style.

HOW MUCH DO I NEED FOR ... ?

These are general guidelines for estimating how much clay and glaze you'll need for projects at home, in the classroom, or in your studio.

One 4oz jar = 2 Square feet -or-
18 of the 4x4" tiles -or- 8 of the 6x6" tiles
1 Pint (16oz) = Four 4oz jars
1 Gallon (128oz) = 8 Pints

A ball of clay the size of an average size apple (that you can hold in both hands cupped) is about 1 pound. As you can see on the Wiziwig ribs page 102; one pound is enough to make a mug or similar-sized piece.
[One bag of Georgies clay = 25 lbs & Two bags = 1 box = 50 lbs]
